

Project Documentation Phase

ADVANTAGES & DISADVANTAGES

Advantages

- Centralized system
- Real-time analytics
- Secure platform
- Scalable design
- Reduced manual work

Disadvantages

- Requires Salesforce license
- Internet dependency
- Limited offline access

9.CONCLUSION:

CRICKSTATS successfully implements a cloud-based cricket performance tracking system using Salesforce. The system provides an efficient platform for storing, managing, and analyzing player and match performance data. It reduces manual data entry and improves the accuracy and accessibility of cricket statistics.

The system enables coaches, players, and administrators to easily monitor performance, generate reports, and identify important performance trends. Salesforce automation and CRM features help streamline data management and provide timely information for better decision-making.

The project demonstrates the practical application of **SDLC, Agile methodology, Salesforce CRM, cloud computing, and database management**. Overall, CRICKSTATS provides a scalable and user-friendly solution that can be further enhanced with advanced analytics, dashboards, and AI-based performance predictions.

10. FUTURE SCOPE

- Mobile application integration
 - AI-based performance prediction
 - Video analysis integration
 - Player ranking system
 - Public statistics portal
- Multi-league support

11. APPENDIX

1. Salesforce Objects & Fields

- Creation of custom Salesforce objects to store cricket-related information.
- Definition of fields for player details, match information, and performance statistics.
- Establishment of relationships between players, teams, and matches.
- Configuration of data types and validation rules to maintain data accuracy.
- Storage and management of cricket records in Salesforce.

2. Manual Match Statistics

- Manual entry of match details, including team names, match date, and venue.
- Recording of player statistics such as runs, wickets, and overs.
- Updating individual player performance after each match.
- Maintaining accurate match records for future reference.
- Using stored statistics to analyze player and team performance.

3. Flow Configurations

- Creation of Salesforce Flows to automate cricket data management.
- Configuration of record-triggered flows to perform automatic updates.
- Setting conditions to control the execution of flow actions.
- Automating repetitive tasks and reducing manual work.
- Testing flow configurations to ensure accurate data processing.

Option 2

APPENDIX

1. Salesforce Objects & Fields

- Creation of custom objects for players, teams, and matches.
- Configuration of fields to store player details and match information.
- Storage of runs, wickets, overs, and other cricket statistics.
- Establishment of relationships between Salesforce objects.
- Management of cricket records using Salesforce data tools.

2. Manual Match Statistics

- Manual entry of match details and player performance.
- Recording of runs scored, wickets taken, and overs bowled.
- Updating batting and bowling statistics after each match.
- Tracking individual player performance and team results.
- Verification of match data to maintain accuracy.

3. Flow Configurations

- Creation of Salesforce Flows to automate data entry.

- Configuration of triggers for specific record updates.
- Automatic updating of player and match information.
- Generation of notifications based on defined conditions.
- Testing and validation of flows to ensure proper execution.
